

Everywhere can be the right place!

Blueberries can be grown everywhere with container cultivation. Growing any variety of blueberries in pots guarantees a significant increase in production yield. The choice of the pot can make the difference. With an optimal mix of acidic soil, coco fibre and perlite the soil structure is no more a problem and it is possible to set up a production facility everywhere and guarantee at the same time the best soil.

The pot cultivation allows a reduced quantity of water, CA.1/10 part of the consumption of the growing in soil.

Thanks to pot cultivation you can have:

- PH control
- Healthier and stronger root system growth with greater yield
- Humidity and stagnation control
- Fertilizers and nutrients control
- Less environmental impact for a reduced
- Use of chemical products

The Pasquini & Bini pots are made of post-consumer plastic and guaranteed for a long life. They are the right solution for blueberries cultivation.

About us

Pasquini & Bini is an Italian company producing articles for plants nursery and home gardening with more than 50 years of experience in the plastic moulding sector. The new management has been operating since 1998 with increasing attention to the needs of the Italian and international nursery market, exporting over 70% of its production to the five continents in over 70 countries worldwide.

We sell our pots in the world speaking only one language, the one of quality.

The production department stretches for 7.000 square meters, with a stocking capacity of 75.000 square meters, to guarantee immediate availability and fast deliveries all around the World. The production, with low energy consumption, is completely automated and runs on 24 hours turn always using the most modern updated technologies available on the market. The dedicated investment in research, in moulds planning and design, always starting from the customer's needs, and the use of only first choice and quality material (free of environmentally harmful components, resistant also in those climatic conditions with considerable temperature variations in the same day) aim to perfect and optimize the cultivation of plants in containers. And, at the same time, to diversify the types of products without changing the essential characteristic: quality.

The most natural habitat for your roots.

ERACLE'S POTS LINE

ERACLE, ERACLE FRUIT and SUPER-ERACLE pots are the perfect containers for the blueberries.

They are designed to guarantee the correct oxygenation to the roots and avoid water excess, main cause of the rotting of the roots, that on its turn, favours the formation of an unhealthy environment of the plant.

Thanks to the feet placed at the bottom, the "plant" stays away from the ground, facilitating the drainage of water through the numerous holes.

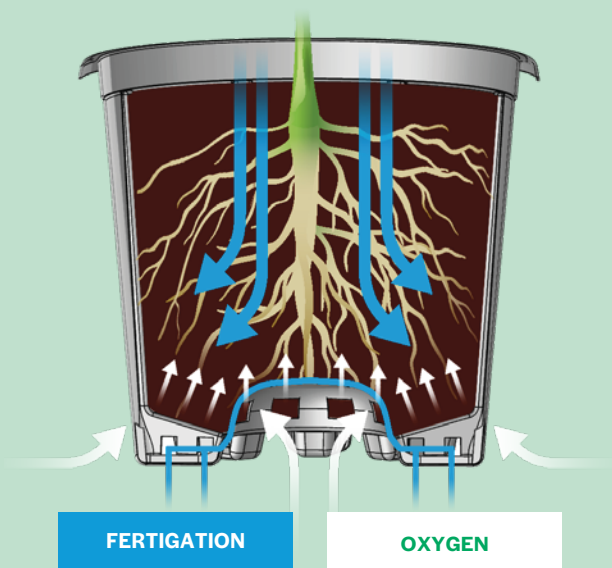

Using the right substrate, the water dosage will always be optimal.

The introfections of the walls guarantee an anti-spiralization action: the result is a faster growth and a correct expansion of the roots.

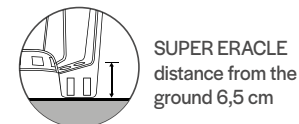

This significantly reduces the growing and fruiting time of the plant.

The material used (black regenerated polyethylene post-consumption) gives elasticity to the pot and guarantees a long life time.

Super Eracle is the best among all those pots which favour the drainage and its structure makes it suitable for the organic cultivation.

SUPER-ERACLE

SUPER ERACLE
distance from the
ground 6,5 cm

ERCOLE AND DRACO

Round pots and square pots which considerably reduce the plant growing time. Thanks to the special air-systems on the wall and the bottom of the pots, the roots grow stronger, healthier and do not spiralize. The pots design makes the root self-pruning and guarantees the right degree of humidity. The holes guarantee a better oxygenation and an excellent drainage. Moreover, the holes on the lower rim of SUPER - ERCOLE POT prevent the roots' spiralization also on the upper part of the plant. DRACO is the new pot with innovative anti-spiral system on the internal wall. The bottom has holes which allow perfect drainage. The pot will give excellent results in producing young blueberry plants.

SUPER ERCOLE POT AND DRACO POT DO NOT LAY ON THE GROUND.

**PROPER DRAINAGE IS VERY IMPORTANT FOR THE HEALTH OF THE BLUEBERRY.
FOR THIS REASON THE POT SHOULD BE SEPARATED FROM THE GROUND.**
